

Informational Report on Lighting Design for Midblock Crosswalks: Publication No. FHWA-HRT-08-053

This report provides information to traffic engineers and lighting designers regarding lighting parameters that impact the ability of drivers to see pedestrians in midblock crosswalks and to enable agencies to evaluate the potential effectiveness of lighting designs. While some visibility concepts are discussed below, this report does not cover all aspects of nighttime visibility and the human visual system. The information is based on static and dynamic experiments performed at the Virginia Tech Transportation Institute and documented in FHWA-HRT-08-052, available at NTIS under publication number PB2008-106431.
